

Index

Prologue	vii
Plenary Lectures	1
Modelling, Simulation and Optimization of Gas Transportation Networks	3
<i>A. Bermúdez, J. González-Díaz and F. González Diéguez</i>	
Interpolation, Quasi-Interpolation and Applications with Radial Functions	25
<i>Martin Buhmann and Janin Jäger</i>	
Entropy diminishing numerical schemes for parabolic equations.	37
<i>Clément Cancès</i>	
Flow, transport, and microbial activities in engineered subsurface applications: numerical modeling and experimentation	39
<i>Johannes Hommel and Holger Class</i>	
Modeling, Global Stability and Optimal Control of HIV/AIDS through PrEP	41
<i>Cristiana J. Silva and Delfim F. M. Torres</i>	
Flux and potential reconstructions for guaranteed error bounds in numerical approximations of model PDEs	43
<i>Martin Vohralik</i>	
Contributions	45
Simplified P_N Finite Element Models for Natural Convection-Radiation Problems	47
<i>J. Abadr, M. El-Amrani, Y. Filali and M. Seaid</i>	
A numerical computation of the integral by splines	48
<i>A. Abbadi and D. Sbibih</i>	
A modified Block Arnoldi method for large-scale Sylvester equations	49
<i>I. Abdaoui, L. Elbouyahyaoui and M. Heyouni</i>	
Comparison between the RANS and LES models for free-surface flows	51
<i>R. Abdellaoui and I. Elmahi</i>	
The Green Supply Chain Management: An Adaptive Immigration Genetic (AIG) Approach	53
<i>O. Abdoun, C. Tajani and J. Abouchabaka</i>	
Numerical simulation of heat diffusion in a homogeneous bar	54
<i>Y. Abouelhanoune, M. El Jarroudi and S. Benlghrib</i>	
Transparent boundary conditions for the Linear Regularized Long Wave equation	55
<i>M. Abounouh, H. Al-Moatassime and S. Kaouri</i>	

On solving Timoshenko transverse vibrating equations via Polynomial Spline Galerkin approximation	56
<i>M. Addam</i>	
Fast computation of Stieltjes constants	57
<i>J.A. Adell and A. Lekuona</i>	
Space-time domain decomposition methods and a posteriori error estimates for the subsurface	58
<i>E. Ahmed, S. Ali Hassan, C. Japhet, M. Kern and M. Vohralík</i>	
Simulation of bioheat transfer in the human eye using domain decomposition methods	59
<i>S. Ahmedou Bamba and A. Ellabib</i>	
A sequential semi-implicit algorithm for computing two-phase multi-component flow with reactive transport in porous media	60
<i>E. Ahusborde, B. Amaziane and M. El Ossmani</i>	
Approximation of Generalized Offset Surfaces by Bicubic Splines	61
<i>R. Akhrif, A. Kouibia, M.L. Márquez and M. Pasadas</i>	
A posteriori error estimates and stopping criteria for Robin domain decomposition methods	62
<i>S. Ali Hassan, C. Japhet, M. Kern, and M. Vohralík</i>	
Superconvergent quasi-interpolant and application to the numerical solution of Fredholm integral equations	63
<i>C. Allouch, A. Boujraf, D. Sbibi and M. Tahrichi</i>	
The numerical solution of weakly singular Hammerstein integral equations	64
<i>C. Allouch, D. Sbibi and M. Tahrichi</i>	
Richardson extrapolation based on superconvergent Nyström and degenerate kernel methods	65
<i>C. Allouch, D. Sbibi and M. Tahrichi</i>	
Padé approximation and quartic B-spline collocation for second-order singular boundary value problems	66
<i>H. Allouche, A. Tazdayte and K. Tigma</i>	
Contribution of hydraulic modelling in flood hazard mapping: Case of torrential wadis in Beni Ansar city	67
<i>N. Amarjouf, M. Oujidi, A.M. Da Costa Lombá and Y. Douzi</i>	
A posteriori error estimates for finite volume solution of nonlinear diffusion problems	68
<i>H. Amor, F. Benkhaldoun, T. Ghoudi and M. Seaid</i>	

Sufficient conditions for the existence of periodic solutions for higher order p -Laplacian functional differential equation with sign-variable coefficient.	70
<i>A. Anane, O. Chakrone and L. Moutaouekkil</i>	
Modelling and analysis of interface problems for the fluid-porous flow .	71
<i>Ph. Angot, B. Goyeau and J.A. Ochoa-Tapia</i>	
An application of semi-hidden Markov models to analyse stock market behaviour	72
<i>J. Martínez-Aroza, J.F. Gómez-Lopera, D. Blanco-Navarro, J. Prieto-Gallego and R. Román-Roldán</i>	
New approach for 3D acquisition using multi-line projection for 3D shape recognition	73
<i>K. Baibai, B. Bellach and N. Elfakhouri</i>	
On the construction of trivariate near-minimally normed blending quasi-interpolation operators.	74
<i>D. Barrera, C. Dagnino, M.J. Ibáñez and S. Remogna</i>	
Non-uniform quasi-interpolation for solving Fredholm integral equations of the second kind	75
<i>D. Barrera, F. El Mokhtari and D. Sbibih</i>	
A new approximation method to implement the charge-flux representation of circuit models in resistive RAMs.	76
<i>D. Barrera, M.J. Ibáñez, F. Jiménez-Molinos, A.M. Roldán and J.B. Roldán</i>	
An optimal G^2 -Hermite interpolation by rational cubic curves	78
<i>B. Belkhatir and D. Sbibih</i>	
Iterative Collocation method for solving nonlinear Volterra integral equations	79
<i>A. Bellour</i>	
A radial basis function partition of unity method for modelling water flow in three-dimensional porous media	80
<i>E. Ben-Ahmed, M. Sadik and M. Wakrim</i>	
A Two-dimensional Riemann Solver for numerical simulation of debris flows	81
<i>F. Benkhaldoun, S. Daoudi, I. El Mahi and M. Seaid</i>	
Unstructured finite volume discretisation of shallow water equations with porosity coupled to morphodynamic model for the simulation of urban flooding.	83
<i>F. Benkhaldoun, I. Elmahi, A. Moumna and M. Seaid</i>	

Wiener Systems Identification	85
<i>M. Benyassi and A. Brouri</i>	
GPU implementation of coupled models of suspended sediment and bed load transport in multi-layered shallow water model	86
<i>M. Boubekour and F. Benkhaldoun</i>	
Analysis and numerical study of a mixed formulation of a two membranes problem	87
<i>M. Bouchlaghem and B. Mermri</i>	
Transportation inequalities for stochastic heat equation	89
<i>B. Boufoussi and S. Hajji</i>	
Wavelet bases of Hermite C^1 -quadratic composite-splines on the interval $[0, 1]$	90
<i>S. Bouhiri, A. Lamnii and M. Lamnii</i>	
Cubic quasi-interpolation spline collocation method for convection-diffusion equations	91
<i>S. Bouhiri, A. Lamnii and M. Lamnii</i>	
Moderate deviations for a stochastic general fractional kinetic equation	92
<i>L. Boulanba and M. Mellouk</i>	
A mathematical model of the interaction between glucose, insulin, β -cells, α -cells and glucagon	93
<i>W. Boutayeb, A. Boutayeb, M. Lamlili and Y. Lamlili</i>	
Identification of Nonlinear Systems	94
<i>A. Brouri, S. Slassi and L. Kadi</i>	
Nonlinear system identification using filtering technique	95
<i>A. Brouri and S. Smail</i>	
Surrogate Reservoir Models for Cyclic Steam Injection Well Probabilistic Production Forecast	96
<i>S. Buitrago Boret and O. Romero</i>	
A multiscale method with Robin boundary conditions for the porous media equations	97
<i>G.C. Buscaglia, R.F. Ausas, F. S. Sousa, R.T. Guiraldello, and F. Pereira</i>	
Remarks on Bernstein operator estimates	98
<i>D. Cárdenas-Morales</i>	
Modeling laboratory scale experiment (TRACE and SPECY) of Fe-Cr redox reaction along with precipitation and porosity change	99
<i>J. Carrayrou, S. Loyaux-Lawniczak, F. Lehmann and Ph. Ackerer</i>	

Numerical analysis of some frictional non clamped thermal contact problem	100
<i>O. Chau and R. Oujja</i>	
A mathematical model of grazer-predator dynamics with two harvesting optimal control policies	101
<i>K. Chouayakh, M. Rachik, K. Satori, C. El Bekkali and I. Elmouki</i>	
Existence of a compressible Navier-Stokes equations with non-homogeneous boundary conditions and rigorous derivation of the compressible Reynolds equation	102
<i>I.S. Ciuperca, E. Feireisl, M. Jai and A. Petrov</i>	
Global existence results for the stable Muskat problem	103
<i>D. Córdoba and O. Lazar</i>	
Influence of a fractured medium on pyrite oxidation reaction	104
<i>Y. Crenner and J. Erhel</i>	
Modelling and computation of residence time in coastal lagoons: The case of Nador lagoon (Morocco)	105
<i>S. Daoudi, E. Deleersnijder, I. Elmahi and A. Yachouti</i>	
Numerical simulation of dye adsorption in three layered soil and models comparison	106
<i>S. Dardouri and J. Sghaier</i>	
Mass and momentum exchanges control two-phase flow of immiscible fluids in highly permeable porous media	107
<i>Y. Davit, S. Pasquier and M. Quintard</i>	
Multiphase multicomponent modelling of the NAPL transfer in the subsurface using Method of Lines	108
<i>R. di Chiara Roupert, G. Schäfer, M. Quintard, M. Marcoux, J. Chastanet, J-M. Côme, and Y. Duclos</i>	
Properties of PLS regression estimators. Application to data from a cement plant in Setif	109
<i>K. Djeddour and A. Sahraoui</i>	
Efficient Finite Element Solvers for Darcy Flows in Porous Media	110
<i>M. El-Amrani, N. Ould Esouid, M. Seaid and N. Yebari</i>	
Dual Reciprocity Boundary Element Method applied to parameter identification problem	112
<i>A. Ellabib and A. El Madkouri</i>	
Identification of bilateral free boundaries by evolutionary algorithm	113
<i>A. Ellabib and Y. El Yazidi</i>	

Development of an adaptive inverse problem for a multi flow dispersion model	114
<i>A. Ellabib and Y. Ouakrim</i>	
Stability Analysis of Multidimensional Discrete-time Linear Systems.	115
<i>A.O. Elosmani, D. Bouagada, and P. Van Dooren</i>	
Numerical modeling of the flow and transport of contaminant elements in heterogeneous porous media of the Bokoya massif (Central Rif, Morocco).	116
<i>A. Errahmouni, E. Gharibi, M. Ghalit and J.-D. Taupin</i>	
Filling holes with edge reconstruction.	118
<i>M.A. Fortes, P. González, A. Palomares and M.L. Rodríguez</i>	
A finite volume scheme for the shallow-water equations with topography or Manning friction	119
<i>F. Foucher, Ch. Berthon, S. Clain and V. Michel-Dansac</i>	
Solving stochastic green transportation problem using metaheuristic: Modeling and simulation	121
<i>A. Gannouni, R. Ellaia and E-G. Talbi</i>	
Regulation process of the system in management of renewable resources via graph theory and fuzzy set	122
<i>T. Ganomanana, D. Hervé, S. Randriamahaleo and H. Rakotonirainy</i>	
A unifying approach to different notions of convergence in approximation theory by linear operators	123
<i>P. Garrancho</i>	
A Global Optimization Algorithm based on Cubic B-spline for Multivariate Test Functions	124
<i>D. Gawali, P. S. V. Nataraj and A. Zidna</i>	
Mathematical Modeling and Numerical of the Atmospheric Pollution at the Level of Free Surfaces	125
<i>M. Ghani, K. Gueraoui and S. Men-La-Yakhaf</i>	
Positive nonlinear CVFE scheme for the compressible two phase flow in heterogeneous and anisotropic porous media	126
<i>M. Ghilani, E. Quenjel and M. Saad</i>	
Optimal knots allocation in bicubic spline interpolation	127
<i>P. González, H. Idais, M. Pasadas and M. Yasin</i>	
Approximation error of 3D fuzzy data by smoothing bicubic splines.	128
<i>P. González, H. Idais, M. Pasadas and M. Yasin</i>	
Strong stabilization of non-homogeneous bilinear systems	129
<i>Z. Hamidi and M. Ouzahra</i>	

1D RBF Approximation of explicit non-regular functions	130
<i>D. Izquierdo, M.C. López de Silanes and M.C. Parra</i>	
Multi-objective optimization of the dissipated transmission energy in wireless sensor network system used for environmental monitoring . . .	131
<i>M. Jabri, O. Moussaoui and M. Moussaoui</i>	
A goodness-of-fit test for the Poisson-Tweedey distribution	132
<i>M.D. Jiménez-Gamero and M.V. Alba-Fernández</i>	
Moment closure for a metapopulation model with cooperative patches .	133
<i>M. Joannides and O. Salles</i>	
Enlarged gradient controllability (E.G.C) of the semilinear heat equation	134
<i>T. Karite, A. Boutoulout and F.Z. El Alaoui</i>	
Computational homogenization for the thermo-mechanical analysis of phase change composite materials	135
<i>M. Karkri</i>	
Modeling of the water and nitrogen transfers in variably saturated agricultural soil.	136
<i>R. Karra and A. Maslouhi</i>	
Hybridization of Curvature and Bézier Curve Applied to Hand-written Arabic Character Recognition	137
<i>A. Kerkour Elmiad, B. Belkhatir and D. Sbibih</i>	
Error Estimates for the Completely Discretized Problem of the Dual Mixed Method for the Stokes Problem	138
<i>R. Korikache and L. Paquet</i>	
An offset curve and surface approximation method by finite elements. .	139
<i>A. Kouibia, M.L. Márquez and M. Pasadas</i>	
Stochastic partial differential equations driven by fractional Brownian motion with infinite delay and impulses	140
<i>E. Lakhel</i>	
A Mathematical model with Optimal Control for the impact of fish consumption and mortality heart disease in Morocco	141
<i>M. Lamlili, A. Boutayeb, W. Boutayeb, A. Moussi and Y. Lamlili</i>	
Uniform Hyperbolic Trigonometric spline wavelets of order three . . .	142
<i>A. Lamnii and M. Lamnii</i>	
Denoising multi-dimensional signals	143
<i>F.Z. Lamzouri and B. Bouali</i>	
Macroscale model for gas slip-flow in homogeneous porous media. . .	144
<i>D. Lasseux, F. Valdés Parada and M. Porter</i>	

Quality Control of Paving Decorations by Evolutionary Approaches. . .	145
<i>F. Lekhal and M. El Hitmy</i>	
Quadratic finite elements approximation of second order linear elliptic equations in divergence form with right-hand side in L^1	146
<i>A. Lidouh, R. Messaoudi and B. Seddoug</i>	
Comparative study between dose calculation algorithms in radiotherapy	147
<i>M. Machichi, Y. Oulhouk, A. Rrhioua, M. Zerfaoui and D. Bakari</i>	
Compensation problem in disturbed convection-diffusion systems	149
<i>M. Magri, L. Afifi and M. Bahadi</i>	
Morphological disambiguation of Arab texts by quadratic splines. . . .	150
<i>A. Mazroui and M. Boudchice</i>	
Probabilistic b -metric spaces and nonlinear contractions	151
<i>A. Mbarki and R. Oubrahim</i>	
Implementation of the Finite Element Method with C program.	152
<i>Z. Mellah and B. Mermri</i>	
New L^2 error estimates of two projection approximations for Cauchy integral equations via regularization	153
<i>A. Mennouni</i>	
A comparison of error indicators for the RT_0 approximation of a reduced model for flow in fractured porous media	154
<i>Z. Mghazli, I. Naji and J.E. Roberts</i>	
Multifont Arabic Character Recognition Using Bézier Curves and Hidden Markov Models.	155
<i>A. Mhamdi and A. Mazroui</i>	
An adaptive knot placement algorithm for Handwriting compression . .	156
<i>D. Michel and A. Zidna</i>	
Hysteresis models and redistribution in porous media flow.	157
<i>K. Mitra, C.J. van Duijn and I.S. Pop</i>	
An Efficient System based on Wireless Sensor Network for a Real-Time Environmental Monitoring	158
<i>O. Moussaoui and M. Jabri</i>	
A hybrid approach for human tracking in surveillance videos.	159
<i>W. Mrabti, B. Bellach and H. Tairi</i>	
Application of Invariant set in Probabilistic metric spaces to asymptotic complexity analysis of some algorithms	160
<i>R. Naciri and A. Mbarki</i>	

The Stochastic Weibull Diffusion Process: Statistical Inference and Computational Aspects	161
<i>A. Nafidi, M. Bahij, B. Achhab and R. Gutiérrez-Sánchez</i>	
Stochastic square of the Brennan-Schwartz diffusion process: Computational aspects and application.	162
<i>A. Nafidi, G. Moutabir, R. Gutiérrez-Sánchez and E. Ramos-Ábalos</i>	
An easy way to evaluate the accuracy of the calibration estimator.	163
<i>S. Nahchel, J. Allal and Z. Zarrouk</i>	
Numerical scheme for anisotropic Darcy-Brinkman's model of two-phase flows in porous media	164
<i>H. Nasser El Dine and M. Saad</i>	
Dynamical contact of two solids in large deformations: formulation, existence and uniqueness results.	165
<i>A. Nifa and B. Bouali</i>	
Filling holes using a mesh of filled curves.	166
<i>M. Pasadas, A. Palomares, P. González and M.A. Fortes</i>	
Statistical splicing of economic series by smoothing quadratic splines . 167	
<i>L. Pedauga, B. Delgado, M.L. Márquez and M. Pasadas</i>	
Integration of hybrid energy system in the electrical grid	168
<i>T. Rabyi and A. Brouri</i>	
Construction of a normalized basis of a univariate cubic C^2 spline space and application to the quasi-interpolation.	169
<i>A. Rahouti, A. Serghini and A. Tijini</i>	
Generating realistic wind speed time series for energy storage	170
<i>S. Raji, A. Arbaoui and M. Sallaou</i>	
A new proposal for measuring electoral disproportionality: the quota index	171
<i>V. Ramírez, M. Martínez-Panero, T. Peña, and V. Arredondo</i>	
FlowMPI: An open source alternative to flow accumulation analysis. . . 172	
<i>J.F. Reinoso, M.J. Ibáñez, and R. Romero-Zaliz</i>	
Computing automatic transformation between homologous cartographic features	173
<i>J.F. Reinoso-Gordo, C. León-Robles, J. Mataix-Sanjuán and R. Romero-Zaliz</i>	
Construction of a bivariate C^2 septic quasi-interpolant using the blossoming approach.	174
<i>A. Serghini and A. Tijini</i>	

Existence and Multiplicity of solutions for a $p(x)$ –Kirchhoff type problem Involving $p(x)$ –biharmonic	175
<i>S. Taarabti, Z. El Allali and K. Ben Haddouch</i>	
Solving a data completion problem for Laplace equation with Genetic Algorithm.	176
<i>C. Tajani and J. Abouchabaka</i>	
On weighted subdifferential and some applications	177
<i>Y. Yousfi, S. Lahrech and A. Benbrik</i>	
Numerical solution of stochastic partial differential systems with additive noise on overlapping subdomains	178
<i>M. Zahri</i>
